PROFILE

Recent Computer Science graduate (First Class Honours) with strong experience in full-stack web development through personal and collaborative projects. Skilled in building scalable applications and experienced in developing responsive user interfaces, RESTful APIs, and implementing authentication and data-driven features. Eager to contribute to a graduate software engineering role and continue developing technical expertise.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java
- **Frontend:** React.js, Next.js, Tailwind CSS
- **Backend:** Node.js, Express.js, Django, RESTful APIs
- **Database:** MySQL, Prisma
- **Tools & Technologies:** Git, Clerk Authentication, Cloudinary

PROJECTS

KUMA: Social Media Platform (Full-Stack Project | Solo Project)

- Built a full-stack social media platform using **Next.js, Node.js, Prisma, and MySQL**
- Implemented **Clerk authentication** for secure login and protected routes
- Developed features including **profiles, follow/unfollow, blocking, posts, comments, and reactions**
- Developed backend logic using **server actions and APIs** for dynamic interactions and search
- Integrated **Cloudinary** and implemented validation/error handling for reliability
- Designed a **responsive UI** and optimised performance using Prisma and modular architecture

FlowBit: Capacity-Based Numeric Transaction Management System (Full-Stack Project | Solo Project)

- Developed a full-stack transaction system using **Django (Python) and Next.js (TypeScript)**
- Implemented **capacity-based transaction logic** with prioritisation rules
- Built **RESTful APIs** for transaction processing, validation, and data handling
- Applied algorithmic logic to ensure **efficient and stable transaction processing**
- Developed a responsive frontend with **type-safe and maintainable code**
- Implemented **validation, error handling, and modular architecture** for scalability

PhoneSine: Mobile E-Commerce Project (Full-Stack Project | Team Project)

- Developed a full-stack e-commerce application using **Next.js** and **Node.js**
- Implemented features including **product listings, cart, and checkout system**
- Designed and integrated **RESTful APIs** for product and order management
- Built a **responsive UI** with dynamic state management and reusable components
- Implemented **input validation and error handling** to ensure reliable performance

Restaurant Order Management System (Full-Stack Project | Team Project)

- Collaborated in a team to develop a **restaurant order management system** using a microservices architecture
- Contributed as a **Frontend Developer**, building the UI with **Next.js**
- Developed a **responsive interface** for managing orders and reservations
- Integrated frontend with **Node.js microservices** for real-time processing and communication
- Implemented **state management and dynamic rendering** for live order updates
- Worked with backend developers on **API integration and data flow**, using Git for collaboration

EXPERIENCE

Service Manager - Chipotle Mexican Grill Restaurant

- Led team operations in a fast-paced environment, ensuring efficient service and high customer satisfaction
- Handled customer issues, trained staff, and maintained food safety and service standards

EDUCATION

BSc Computer Science - *First Class Honours*

BSc Mathematics

Royal Holloway, University of London - July 2025

Yangon University (Partially Completed)
